

PRESS RELEASE

Real Life “Dr. Dolittle” to Tour Canada to “Talk” with Animals

Georgetown, Ontario – Animal communications expert Claudia Hehr will hit the road this spring to bring “The Voice of the Animals” Canada Tour to numerous communities across the country. Hailed as a “real-life Dr. Dolittle”, Hehr possesses the unique ability to “talk” with animals.

During the tour Hehr will lead free educational presentations to show pet owners that animals can actually hear when people talk with them and how anyone can help an animal in any situation by knowing how to correctly communicate with them. “This information will reduce fear and stress, make the lives of humans and animals better and easier, and will save many animal lives,” says Hehr.

The presentations will take place wherever people are “open to hearing the message”, says Hehr. This could include pet stores, rescue organizations, boarding stables, coffee shops, community centres, businesses and churches. Hehr invites interested parties to contact her to arrange for the tour to visit their town or city.

The tour’s second goal is to find loving and caring homes for at least 100 homeless animals. Hehr will “talk” with a variety of animals that have a history of living in shelters, rescue organizations or boarding stables. “I will ‘interview’ these wonderful animals to find out about their past, why they act the way they do, or what homes they need and want,” says Hehr. The interview findings will be posted on social media in an effort to attract the right guardian for these homeless animals.

Hehr’s commitment to improving the lives of animals is illustrated by the fact that she is trading in her apartment and possessions for a mobile home to use during the tour. Hehr estimates she will travel 20,000 km during the six-month tour and welcomes any donations to help offset tour costs.
